

# Experts in Skin

**C**osmetic treatments offer you the opportunity to give yourself a lift, to treat yourself by caring for your skin with specialist, individualized care. At the Skin Centre in Tauranga, they provide a range of treatments to bring out a more beautiful you.

## Baggy Eyelid Surgery

Our eyes are the window to our personality. Heavy, baggy eyelids that make you constantly look tired often make us look older than we actually are. "The most common cosmetic procedure that people come to see me about is to have their eyelids improved" Says Dr Paul Salmon. Comments from other people such as "You look exhausted, you look like you could do with a holiday, you look tired all the time" are some of the most common reasons that spur them to do something about their baggy lids."

It's true, baggy eyelids make you look constantly tired and unalert even if you're feeling fine, drooping lids and bags under our eyes are very ageing. At the SkinCentre, blepharoplasty is the most popular cosmetic procedure because it fulfils all the right factors; it's affordable, it has a reliably satisfying effect, a short downtime and a great safety profile. "I have operated on over 1000 lids without a single infection, hematoma or other significant complication. Something we are very proud of at the SkinCentre. It's a very safe procedure at our facility with the techniques we use." Says doctor salmon

At the SkinCentre, eyelid surgery is a daily occurrence. With any procedure, experience is critical, the more you do the better you get, so if you want great results and a safe operative course: go and see someone who has done hundreds at least. Dr Salmon says "To achieve a youthful open eye, it's important that attention must be paid to the position of the eyebrow. As we age, the eyebrow settles back and down and when the brow skin is crowding the lashes it needs to be addressed at the same time. We can achieve this when treating baggy upper lids by lifting the brow without the need for extra incisions."

At the SkinCentre they have been offering a full range of Cosmetic Dermatologic Surgery for nearly twenty years, Botulinum injections, Hyaluronic Fillers, Lasers for thread veins, Lasers for varicose veins, Laser treatment of Acne, Hair Transplantation, Fat Grafting for augmentation of the cheek bones and improvement of baggy lower lids, treatment of saggy jowls and necks, baggy eyelids, treatment of fatty bulges with tumescent liposculpture and "scarless" breast reduction.

What's on offer at the SkinCentre Auckland and Tauranga?

## Body Contouring Liposculpture

This is a safe, effective and potentially permanent procedure. If you have unsightly bulges you can't get rid of with dieting and exercise, Liposculpture offers you an instant solution. New advances in technology have made this technique easier and less expensive. Founder of the SkinCentre Dr Paul Salmon introduced this procedure to New Zealand and after 20 years experience, Dr Salmon is our most experienced practitioner with a safety record second to none.

## Neck and Jowl Lifting

Advances in Cosmetic Dermatology and its technologies allow minimally invasive rejuvenation of the jowls and neck as a day stay procedure with very minimal downtime.

## Botox/Dysport

This is our most popular procedure. Extremely effective, this is an easy way of removing frown lines and crows feet. Tiny amounts of Botox or Dysport are injected into the muscle affecting these facial lines and within days the muscle relaxes. Your frown lines or crows feet flatten and look smoother.

## Fat Transfer

This rejuvenating day stay procedure under local anesthetic restores a more youthful contour to the face and/or hands in one or two treatments. Through a tiny hole in your thigh, fat is harvested and placed to restore youthful cheek contours which have diminished with age.

## Fraxel

Fraxel is a new technology that can help reverse the visible effects of ageing and skin damage, helping you look as young as you feel. It provides revolutionary improvements in recovery time and safety in the treatment of weather beaten skin, sun spots and acne scars. Laser Treatment of Broken Capillaries At the SkinCentre, 3 different types of laser are available to ensure just the right treatment for those unsightly veins on the nose, cheeks or legs.

## Sclerotherapy

This is a treatment used to eliminate those painful, unsightly and unnecessary spider veins on the legs. Small amounts of solution are injected into the veins, shutting them down over the next few weeks.

## Hair Transplant

Hair replacement surgery is an area of tremendous advances in the last five years. The Skin Centre uses state of the art Follicular Techniques to help you re-establish your hair. The results are a natural hairline. The number of sessions required will depend on your extent of hair loss.

## Chemical Peels

The team at the Skin Centre are skilled at selecting the right peel for your skin. Chemical Peels are a time tested treatment for skin blemishes and provide smoother, clearer and younger looking skin.
